

LOADING BAY EQUIPMENT SERVICE, REPAIRS & UPGRADES

A&C Maintenance Limited is one of the few companies in the UK who independently manufacture our own Loading Bay Equipment within the UK. With our extensive range of stock we have the ability to Service, Repair & Upgrade all types & makes of Loading Bay Equipment. Listed below are examples of our services available.

We carry a range of Numerals for fitting on site to either the Doors or Shelters.

Traffic Lights Upgrade - We stock a number of traffic light systems, 24V AC/DC or 240V IP66 Enclosure.

Dock Light - We carry a range of Dock Lights in stock. Supply & Fit new or replace existing.

Dock Buffer Upgrades - Damaged or worn buffers can be easily replaced on site with new. Existing Bumpers can be upgraded to Moving Bumpers. Mobile Bumpers follow the trucks movement during the loading/unloading operation & avoid the premature wear of Rubber Bumpers.

Vehicle Wheel Restraint Upgrade - Our wheel restraint system is an interlocked wheel chock which is manually positioned beneath the vehicle wheels in order to maintain it close up to the Dock & minimise the likely hood of vehicle creep. The chock is fitted with a sensor which can be interlocked such that the Dock Leveller operation is inhibited unless the chock is correctly located.

The Unit can also be interlocked to :-
Traffic Light System, Inflatable Dock Shelter Automatic Door Opening, Audio Alarm System.

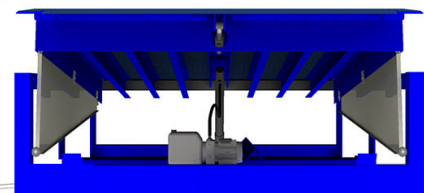

Dock Shelters & Dock Pads - We have the facilities to replace damaged Shelters, Foam Pads, Inflatable Shelters & Loading Houses. We carry stock of Sheeting & Insulated panels which can be interchanged on site.

Hydraulic Conversion Kit - Existing mechanical Dock Levellers can be upgraded with our hydraulic conversion kit. The Lip Kit is adjustable to all brands of Dock Leveller.

Dock Leveller Replacement Lips - Over a period of time Lips can become worn & damaged. We stock replacement Lip Kits in all sizes & capacities. The Lip is fabricated from 13mm/15mm thick Durbar Plate with reinforcement to the underside. Hinges are generously sized to match the capacity and are fitted to a steel back plate for welding to the existing Dock Leveller frame. The replacement Lip Kit is achieved with a low capital investment & is adaptable to all Dock makes.

Wheel Guides - Upgrades/Replacement damaged wheel guides can be replaced on site & our engineers would carry out the full work to remove the existing guide & cast in the new. We carry an extensive stock of wheel guides.

(Damaged Wheel Guides may cause the lorry to enter the Dock at the wrong angle causing additional/increased damage to the shelter, bumpers or even structure)

ANY UPGRADE/MODIFICATION TO THE DOOR MUST BE CARRIED OUT BY A QUALIFIED DOOR ENGINEER

PLEASE CONTACT OUR SERVICE & REPAIRS DEPARTMENT FOR ANY SITE SURVEYS OR QUOTATIONS.
