

PROJECT: Offices, Rotherham

PRODUCT: Electric Safeguard 76 Roller Shutters, 14No. 1510mm(W) x 900mm(H)

Our client was frustrated and angry at youths throwing stones and damaging their office windows. The client wanted security shutters to therefore protect all of his windows. However, there were two important points included within the project brief:

1: Shutter boxes must not be too large or obtrusive on the rear windows. Our client had seen other companies with our competitors shutters on them and thought they looked too industrial looking for an office building.

2: Light was an important factor to the reception entrance shutter when opening and closing in the dark.

Our security shutters have a small compact shutter box as standard which includes mitred corners instead of rectangular. This proved to be successful in securing the project as our product was not industrial looking.

The reception shutter had a special larger design hood which included 2No. stainless steel down lights fixed into profile cut holes in the new hood cover, illuminating the reception area.
