

**PROJECT:** Passenger Transport Workshops, Sheffield

**PRODUCT:** 19No. Handchain Roller Shutters, 2No. Electric Roller Shutters and 8No. Wicket Gates.

The existing workshop doors were old, bi-fold scissor action doors which were balanced with very heavy counterbalanced weights. We and our client were concerned about the health & safety of these doors. No safety features were fitted and no possibility of health & safety upgrades available.

The contract involved the dismantle & removal from site of 21No. Bi-folding scissor action doors, supply & installation of 19No. Handchain Operated Roller Shutters 3500mm(W) x 5000mm(H) including independent safety brakes, 2No. Electrically Operated Roller Shutters 3500mm(W) x 5000mm(H).

The clients fire officer also required escape routes through the new doors. 8No. Special purpose made bespoke wicket gates were manufactured and installed with a panic push pad inside & lockable access handle to outside.
