

PROJECT: Industrial Estate, Mansfield

DETAILS OF WORK: Pair Of Traffic Barriers 9000mm (W)

Project brief was to replace a pair of existing steel swing gates with a pair of new traffic barriers.

Our client required the entrance to the industrial estate be closed to pedestrian access but automatically open for vehicles.

A&C engineers dismantled and removed the existing steel gates and installed a new pair of Traffic Barriers, each with a 4.5M span. To prevent access by pedestrians a double skirt was fitted to each barrier. Automatic operation for vehicles was by induction loops to both sides of the opening.

All civil works was carried out by A&C engineers.
