

PROJECT: Factory, Sheffield

PRODUCT: Safegate 10, Security Sliding Gate

During the summer months our clients factory becomes very hot and humid. The existing sliding folding door is often kept open to allow air to flow through the building.

The factory is situated within the middle of the city and the general public walks past the door opening everyday. Unfortunately on a number of occasions, items had been stolen from inside the building due to the door being open.

Our client approached us with the problem of solving the security issue, but still maintaining air flow into the building.

Our answer to the problem was a pair of our Safegate 10 Security Sliding Gate. The gate was powder coat red to match our client's corporate colour.

The gate can be fully locked preventing unauthorized access but still allowing the flow of air into the building.

Since installation of the Safegate 10, there has been no instances of theft.
