

PROJECT: Commercial Units, Derbyshire

PRODUCTS: Supply of 20no New Safeguard Series 1200 Steel Hinged Door Sets

The project brief was to replace the existing damaged/worn timber door sets to the front and rear of commercial units on a industrial estate.

The doors to the rear of the building were fitted with fire escape hardware and a security drop bar system for when the unit is unoccupied.

The front entrance doors were fitted with a mortice lock complete with cylinder, lever handles and a letter box.

All doors were supplied with a powder coat finish. The existing doors were cleared from site by our engineers. All new door frames were mastic sealed by A&C.
